REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The independent claims recite the limitations, taking claim 1 as exemplary, "bypass circuitry capable of receiving data results...said bypass circuitry, comprising: a first plurality of bypass tristate line drivers having input channels coupled to first output channels of a first plurality of said source devices and tristate output channels coupled to a first common read data channel in said read stage; and a first multiplexer having a first input channel coupled to said first common read data channel and an output channel coupled to a first operand channel of a first execution unit in said first execution stage." Most prior art searched and found have taught bypass circuitry implemented with only multiplexers or tristates and had multiple buses, not a single bus result data traveled across. The prior art that did teach a combination of multiplexers and tristates taught it for register file accesses and did not have the interconnections specifically stated in the claim. The prior art searched and found also did not teach motivation to combine the multiplexers and tristates in a device, let alone for bypassing data from an execution state or write stage to a read stage in a pipeline.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
